

FAST FACTS

Revalor®-G (trenbolone acetate and estradiol)

For both pasture steers and heifers

- ▶ No need to switch products
- ▶ Increased pasture gain

Effective in all types of forage

- ▶ Low- to high-gaining pastures
- ▶ Dormant to lush green pasture

Less risk

- ▶ Lower estrogenic activity for better gains on less energy
- ▶ Better gain in adverse weather or pasture conditions
- ▶ No adverse effects in subsequent feedyard performance
- ▶ No cautions on potential side effects

More value

- ▶ Administered once calves are weaned and turned onto grass
- ▶ Get more out of marginal pasture situations before green-ups

Increases ADG even at lower weight gains

- ▶ An additional half pound of total gain per head in a grazing period
- ▶ No difference in feedyard performance or carcass quality

Long-lasting performance

- ▶ Effective for at least 120 days
